

Hands-on Packages

Task 1 :

1. Create the package structure:

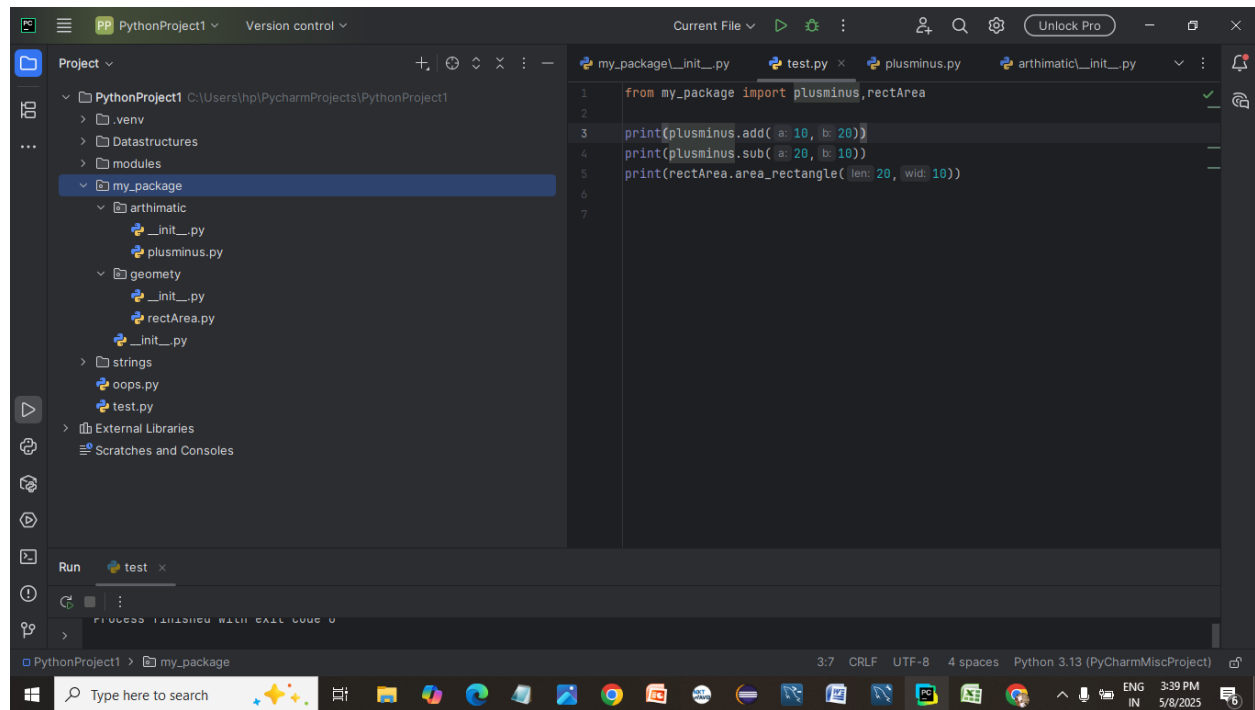

my_math/

└─ __init__.py

└─ arithmetic.py

└─ geometry.py

Code :

Task 2)

2. Add code to the modules:

arithmetic.py

```
def add(a, b):
```

```
    return a + b
```

```
def subtract(a, b):
```

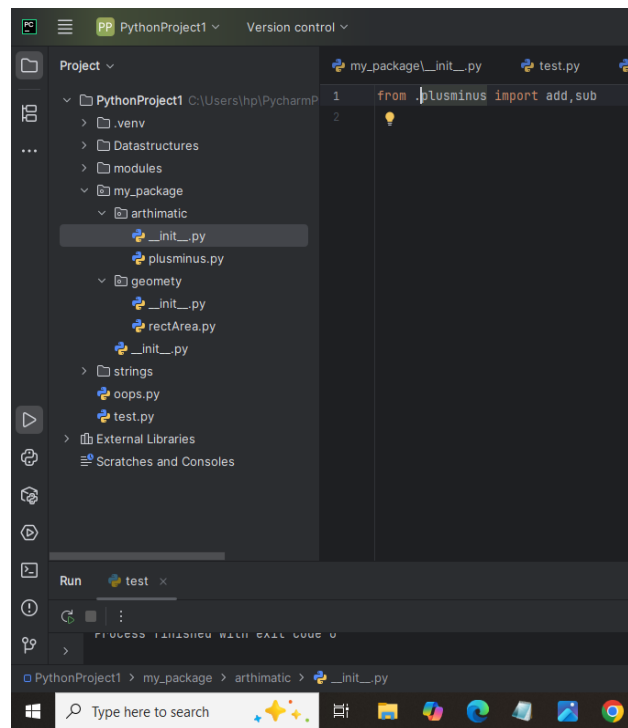

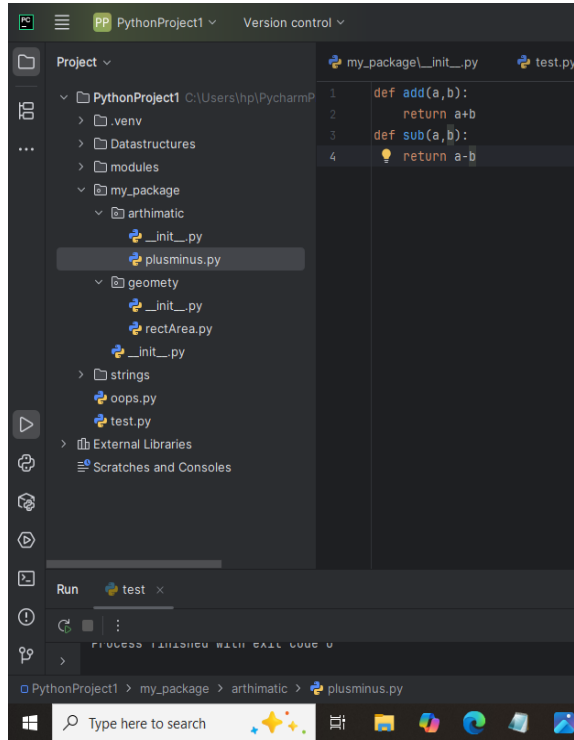

```
    return a - b
```

geometry.py

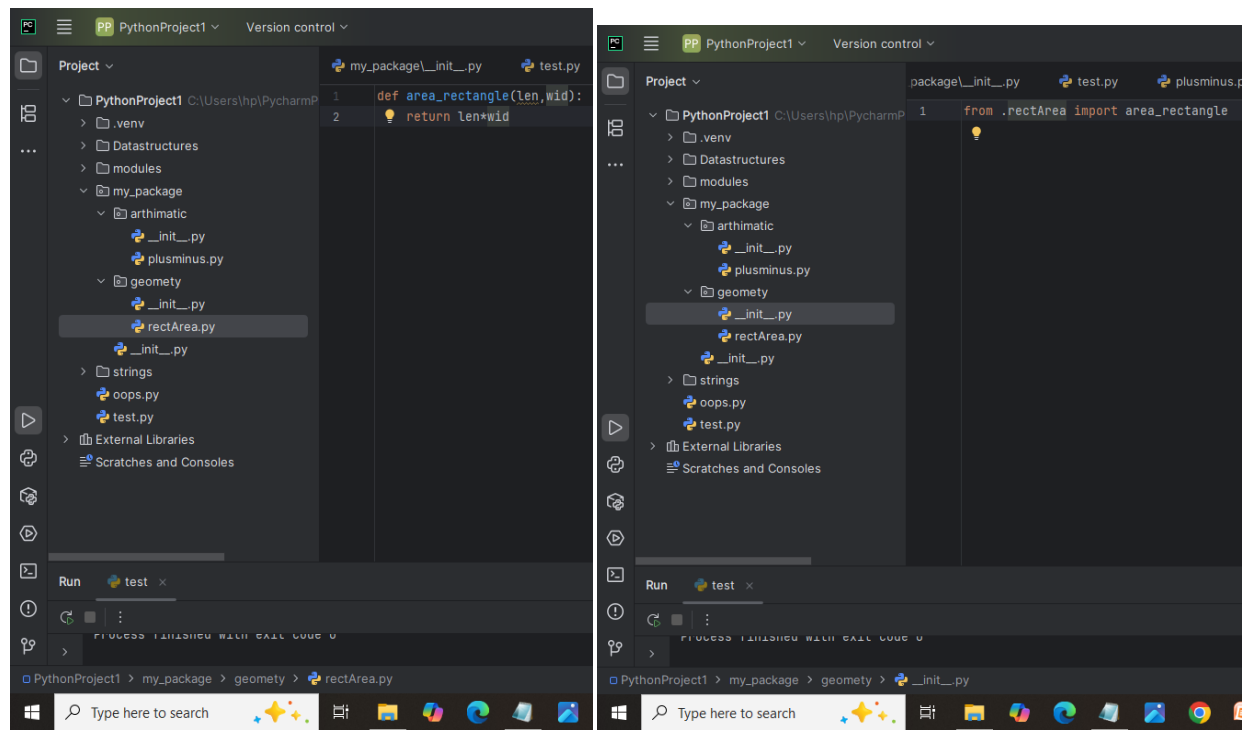

```
def area_rectangle(length, width):
```

```
    return length * width
```

code :

arithmetic

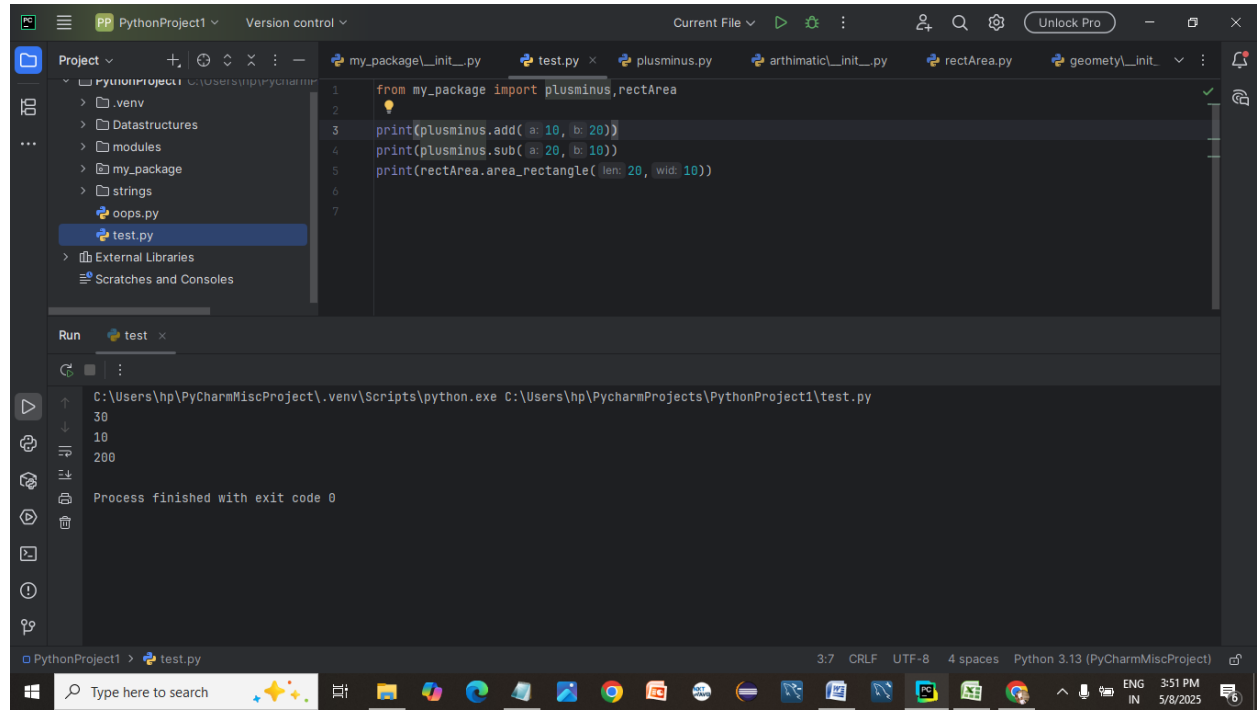

Geometry

Init.py

Output)

The screenshot displays the PyCharm IDE interface for a project named 'PythonProject1'. The left sidebar shows the project structure with folders like '.venv', 'Datastructures', 'modules', 'my_package', 'strings', and files 'oops.py' and 'test.py'. The 'test.py' file is selected and open in the editor. The code in 'test.py' is as follows:

```
1 from my_package import plusminus, rectArea
2
3 print(plusminus.add(a: 10, b: 20))
4 print(plusminus.sub(a: 20, b: 10))
5 print(rectArea.area_rectangle(len: 20, wid: 10))
6
7
```

Below the editor, the 'Run' tab is active, showing the execution command and output:

```
Run test x
C:\Users\hp\PyCharmMiscProject\.venv\Scripts\python.exe C:\Users\hp\PyCharmProjects\PythonProject1\test.py
30
10
200
Process finished with exit code 0
```

The status bar at the bottom indicates the file is 'test.py', the encoding is 'UTF-8', and the Python version is 'Python 3.13 (PyCharmMiscProject)'.
